

DISCHARGE DEVICE FOR A HARVESTING MACHINE

Abstract of the Disclosure

A crop discharge device for discharging crop from a harvesting machine, comprising a rotatable rotor mounted in a housing having a movable bottom. The bottom can be put into a reciprocating motion in order to convey the crop to be discharged to the crop discharge device. Chaff from a cleaning shoe is directed by an oscillating bottom to the bottom. The discharge device may comprise a straw chopper which discharges chaff and straw from the harvesting machine in the chopping mode.
